CUB described in detail in U.S. Patent Application Serial No. \_\_\_\_\_,  
entitled "A Method, System and Program Product for Multiprofile Operations and  
Expansive Profile Operation," by Shell Simpson, Ward Foster, and Kris Livingston  
CUB and bearing Attorney Docket No. 10007690-1, the disclosure of which is hereby  
5 incorporated by reference into the present disclosure.

As indicated in FIG. 3, the system 300 includes an imaging client device 302.  
The imaging client device 302 comprises a web browser 304 that is adapted to access  
web content 306 derived from imaging service web content 314 and color adjustment  
service web content 318 of web servers 312 and 316, respectively. The web content  
10 306, like content 212, typically comprises text, graphics, and various commands. The  
commands can comprise one or more sets of executable instructions that are  
downloaded into the browser 304 to perform a service requested by the user. These  
instructions can be written in any suitable language including, for instance, HTML,  
Java™, JavaScript™, C-sharp, or other appropriate language. A variety of different  
15 functionalities can be served by the executable instructions. For example, the web  
content 306 normally includes executable instructions for causing target graphics, *i.e.*  
graphics provided by an accessed web site, to be displayed to the user.

In the embodiment shown in FIG. 3, the executable instructions are further  
used to access a personal imaging repository 320. These instructions typically  
20 comprise system-wide generic access instructions 308 that call on methods of an  
imaging extension 310 to access the personal imaging repository 320 and perform  
various web imaging operations. These instructions 308 are designated as "generic"  
because they are independent of the configuration of the user's personal imaging  
repository 320. As is discussed in greater detail below, the generic access instructions
